

“

I am the youngest science professor in town and I've achieved this without the aid of any digital system. I believe in two things : paper and pen.

Michael Bing

Young precarious science professor

ACTIVITIES

Michael is 31 years old and he comes from a small countryside village with no more than 200 inhabitants. He has spent all his life studying hard to become a scientist. His main model was his 90 years old math professor and, for this reason, he is quite reluctant to any kind of teaching innovation. His lessons involve : paper, pen and the blackboard.

GOALS AND DESIRES

Michael would like to improve his life by having more free time to spend on his new theory that will for sure grant him a nobel prize. For this reason he would really like to speed up those boring parent-teacher meetings.

DIGITAL TOOLS

NEEDS

- Michael needs to organize better the time he spends on parent-teacher meetings.
- Michael needs a way to publish additional homeworks for his students

OBSTACLES AND FRUSTRATIONS

- Difficulties in responding to all parent's requests if they come all at once in the same day and without any kind of notice.
- Impossible to communicate with students in extra school time
